

A METHOD AND APPARATUS FOR WIRELESS
MANAGEMENT OF MOBILE ENTITIES

ABSTRACT OF THE DISCLOSURE

[0078] This invention relates to a method and apparatus for wireless management of mobile entities. More particularly, the invention relates to an end user device which will allow a trusted entity, e.g., a service provider, to repair the end user device in the event that the end user device becomes inoperable. In addition, the method allows for the trusted entity to update the end user device. Notably, the trusted entity is able to accomplish these tasks from a remote location using an air interface, e.g., a wireless connection.
